

the box that counts

we kill germs like the flu and E. coli
on surfaces*.

of course, we also take out
smoke and odors.

80% of colds and flu are caused by
contact to germs on surfaces*

*"It's tough to constantly spray and wipe
everything in my home to make the best
environment for my grandchildren. And when
you read the warning labels on those products,
it's scary. ecobox gives me the peace of mind
to know I'm making it safer for my little ones,
without toxic chemicals."*

There's only one ecobox with SurfaceGuard,
and it's only available through your
Independent EcoQuest Business Owner.

things you use odors that just show up or things that are just icky

it's the stuff outside the box that counts

prevention

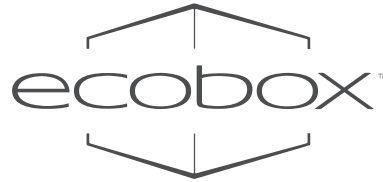

ecobox kills germs on surfaces*. That's proven. Viruses on doorknobs, like the flu, die. Bacteria, like E. coli and Salmonella on countertops, are stopped in their tracks. And mold is attacked wherever you can see it. That means less exposure to illness-causing germs for your friends and family.

active

A filter can't reach germs on surfaces, so ecobox quietly sends the solution to the pollution – without toxic chemicals, to safely protect your family and help prevent the spread of germs. On the way, it knocks out smoke and odors, without cover-ups.

nature based

ecobox brings the science and safety of nature indoors. Think outside, inside. Natural, germ-killing, odor-reducing processes found in sunlight and thunderstorms are recreated in the home. Based on NASA research to create safer environments during space travel, ecobox with SurfaceGuard creates healthier living spaces. That means less money spent on harmful chemical sprays and wipes, and more time to spend with loved ones.

Think Outside. Inside.™

"If you can reduce exposure to germs, you can reduce the amount of infections they cause. ActivePure does that".

- Dr. James Marsden, PhD.
Regent's Distinguished Professor
Kansas State University

so you can worry less about

places you touch

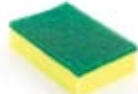

odors that linger

stuff that smokes

things you use

odors that just show up

or things that are just icky

know that it works

Kansas State University Tested the ActivePure Technology† in SurfaceGuard and found that, in less than 12 hours, over 99.9999% of H5N8 Flu virus – Avian Influenza – was neutralized. Imagine that kind of germ-killing power in your bathroom, kitchen, and bedroom.

Lightweight and portable, ecobox is an effective part of EcoQuest's total protection package for whole-home environmental conditioning.

* University testing demonstrates the ability of EcoQuest's ActivePure technology to substantially reduce microbial populations on surfaces. Field results may vary based on environmental conditions. These statements have not been evaluated by the FDA. These products are not intended to diagnose, treat, cure, or prevent any disease.
